

Kurtosis Labs

Decision Structure for Safer Capital Allocation

PROBLEM

Quoted Yield Does Not Equal Realized Returns

APY does not guarantee realized returns. In practice, yield leaks across execution, risk, and allocation.

The problem is not finding attractive yields. The problem is preserving them through decision quality and execution.

PROBLEM

Why Raw Optimisation is not Deployment-Ready

The Search Gap

- Raw optimisation can find mathematically interesting outputs, but not necessarily usable ones

The Constraint Gap

- Real portfolios must obey liquidity, policy, and execution limits

The Execution Gap

- A result is not useful unless it can be turned into a safe, real-world allocation decision

Why Projected Returns Break in Practice?

THE PROBLEM

Modern Finance is a Giant Maze

- A strategy can look attractive on paper
- Real allocation decisions involve many possible paths, constraints, and timing risks
- Traditional approaches often settle for feasible answers, not the best executable ones

THE RESULTS

Returns Leak in Practice

- Delays reduce edge
- Constraint violations force weaker decisions
- Fees and slippage eat returns
- **20% Profit** can become a **15% real loss** due to bad timings and hidden fees

THE SOLUTION

Where Kurtosis Helps

- Uses quantum-assisted searches difficult allocation problems
- Enforces portfolio and execution rules
- Produces decisions that are safer to implement
- Provide real return rates before you invest

SOLUTION

How Kurtosis Works

We know exactly why quantum alone *fails in production*, and we are building the *missing layers* that make it usable

Check out our MVP here:
<https://kurtosis-labs.com/mvp>

SOLUTION

Where Quantum Fits

Some allocation problems have too many possible paths to check quickly. Quantum helps us look through more of them before we commit capital.

Too many possible choices

- In real markets, there are many ways to move capital
- Most fail once timing, fees, and rules matter

Quantum helps us search

- We use it to search through more candidate paths
- That helps us find better options faster

Kurtosis makes it usable

- We apply risk, liquidity, and execution rules
- Only workable decisions move forward

Quantum looks through more options. Kurtosis decides which ones are safe to use.

- Quantum does not make the final capital-allocation decision by itself
- It surfaces promising candidate paths
- Kurtosis checks those candidates against risk, liquidity, and execution rules
- Only the workable ones move forward into real decisions

Kurtosis already has API-based access to quantum hardware for testing and orchestration.

How Kurtosis Generates Value

PRIMARY BUSINESS MODEL

High-Yield Smart Safe

with vault curation & quantum optimisation

User deposits money in our Smart Safe, We use our math to grow it.

Your Profits

Your cash grows, we take a small tip

Keeps 80% of profits made

\$100

annual revenue per \$1,000 of deposited

Our Profits

- 20% Performance Fee
- 0-1% Management Fee
- 3% Net yield Uplift

\$35,000

annual revenue per \$1M of Total Value Locked

HIGH REVENUE SERVICES

Risk Management-as-a-Service (RMaaS)

through “white-glove” services & quantum optimisation

REVENUE STRUCTURE

Hybrid
fee structure
(fiat + tokens)

Annual
platform fees

Implementation Costs

- **Annual Rent:** Steady subscription fees to use our engine.
- **Setup Fee:** One-time cost to plug our tech into their platform.
- **Success Bonus:** A small share of the extra profit we generate for them.

MARKET SEGMENT

Institutional partnerships

Vault Operators

Lending Protocols

Asset Allocators

Competitive Landscape

Feature	Kurtosis Labs	Gauntlet	Chaos	Steakhouse	RE7	Block Analitica	AAVE	Morpho
Decision Speed								
Autonomy								
Deployability								
Real-Time Execution								
<i>Risk Controls</i>								

Fully Implemented Feature

Partially Implemented Feature

Kurtosis combines decision speed, deployability, and risk controls in one layer.

COMPETITION

Competitive Landscape

Where Kurtosis sits in the market

What sets us apart?

We are building a decision layer, not just a monitoring tool

Our focus is deployable allocation decisions, not research outputs

Quantum is part of the backend advantage, not the whole story

Yield, Vaults, and Protocols

The Big Players are investing in Real-World Assets

\$100B Projected Institutional Wave

The world's largest banks
have already launched
tokenized funds

The Vault Safety Gap

- Transparency: If the bank cannot see how it works, they won't invest in it.
- Reaction speed under stress: Current systems are too slow to protect your money during a crash.
- Preservation of realized returns: Money disappears through small leaks before it reaches you.

Over **\$3.4B Lost**
in 2025 alone

Market Adoption

We focus on partnerships with crypto-native allocators and expand into institutional infrastructure with proven traction.

0-3 MONTHS

Design

- 1-2 vault providers to build on
- 3 live on-chain strategies
- 1-2 RMaaS pilots
- \$1-3M in Total Value Locked (TVL)
- local patents filed

3-6 MONTHS

Standardize

- 3-5 partners (vault protocols and DAOs)
- 5 live on-chain strategies
- repeatable, execution playbook for RMaaS
- \$5-10M in TVL
- international patent filed with PCT

6-12 MONTHS

Scale

- 10+ partners
- established strategy pipeline
- deployment of Decision Infrastructure
- \$30M+ in TVL
- 2-3 paid RMaaS clients (\$500K-1M tickets)

Partnerships

RANGER LABS (ACTIVE)
Vault Provider
Kurtosis Labs as a Vault Curator

DRIFT (IN PROGRESS)
Vault Provider
Kurtosis Labs as a Vault Curator

Hackathons

COLOSSEUM
DeFi Ecosystem
Participating in the Frontier Hackathon

Research Agreements

QUANTUM COMPUTING SOCIETY PHILIPPINES
Quantum Ecosystem
Letter of Interest for Research Collaborations

TEAM

We are a technical team with start-up experience in DeFi software and deep research in quantum computing and quantitative finance.

CO-FOUNDER, CEO

Kai

3 years of Quant & Quantum Research
CS & QF@SMU
Southeast Asia Winner @ Quantathon 2025
Quantitative Research @ WorldQuant
BlackRock Aladdin Implementation @ EY

CO-FOUNDER, CPO

Bryan

4 years in Developer Experience
CS@NTU

How GET Grant Supports our Journey

AI Tools

- Supports research
- Development assistance
- Faster Iterations

Est. Amount:
\$1,300

Data, RPC/API Services

- Reliable access to on-chain market
- Helps with testing, simulation & live integrations

Est. Amount:
\$1,400

Operational Subscription

- Domain Name
- Email
- Collaboration/Design tools

Est. Amount:
\$800

Incorporation / Administrative

- Reserved for any administrative setup
- May be redirected to Data services

Est. Amount:
\$1,500
