- Reference books

Final Quiz: Quiz 2

Visible to

- Content**
- Student Progress

The quiz will take place in the school labs, and all students are required to attend in person.

Quiz Details:

- **Question Type:** Single-answer MCQs (default) and multiple-correct-answer MCQs (specified).
- **Content:** All lecture content (both the first and second halves), including a question on exception handling.

If you have a valid reason (e.g., a medical certificate) for being absent on the quiz day, please contact your lecturer for a short leave of absence (SLOA) using the link below:

<https://forms.office.com/r/L47ChppB9J>

and email Dr. Li Fang (asfli@ntu.edu.sg) to request a make-up quiz. Note that you must provide supporting documentation.

The make-up quiz will be arranged. Please note that, according to CDC policy, the make-up quiz

Date	Day	Time	Venue	Quiz	Duration

Quiz 2 revision

In Object-Oriented Programming, what is the purpose of abstraction at the class level?

What is the output?

```
interface Greeting {  
    void sayHello();  
}
```

```
public class Main {  
    public static void main(String[] args) {  
        Greeting g = new Greeting() {  
            public void sayHello() {  
                System.out.print("Hello from Anonymous ");  
            }  
        };  
  
        Greeting l = () -> System.out.print("Hello from Lambda ");  
  
        g.sayHello();  
        l.sayHello();  
    }  
}
```

What is the output?

Boundary class represents:

Consider the following Java code:

```
class Animal {  
    void sound() {  
        System.out.println("Animal sound");  
    }  
}
```

```
class Dog extends Animal {  
    void bark() {  
        System.out.println("Dog barks");  
    }  
}
```

```
public class Main {  
    public static void main(String[] args) {  
        Animal a = new Dog();  
        a.sound();  
    }  
}
```

What will be the output?

Consider the previous Java code, What will be the output?

```
class Animal {  
    void speak() {  
        System.out.print("Animal speaks ");  
    }  
  
    void play(Animal a) {  
        System.out.print("Animal plays with Animal");  
    }  
}
```

```
class Dog extends Animal {  
    void speak() {  
        System.out.print("Dog speaks ");  
    }  
    void play(Dog d) {  
        System.out.print("Dog plays with Dog");  
    }  
}
```

```
public class Main {  
    public static void main(String[] args) {  
        Animal a = new Dog();  
        Dog d = new Dog();  
  
        a.speak();  
        a.play(d);  
    }  
}
```

What is the output?

Consider the class:

```
class Student {  
    double calculateAverage() { }  
    double getHighestScore() { }  
    double getLowestScore() { }  
    boolean isPassed() { }  
}
```

Which statement is correct?

Complete the code so that it correctly defines a method that returns the first element of an array.

```
public class Main {  
  
    public static _____ getFirst(_____ arr) {  
        return arr[0];  
    }  
  
    public static void main(String[] args) {  
        Integer[] nums = {1, 2, 3};  
        String[] words = {"A", "B", "C"};  
  
        System.out.println(getFirst(nums));  
        System.out.println(getFirst(words));  
    }  
}
```

Complete the code so that it correctly defines a method that returns the first element of an array.

**What is true about runtime polymorphism (method overriding)?
(Select ALL correct answers)**

A University system:

A Student enrolls in Courses

A Course contains Students

A Student can exist without a Course

Which are TRUE?

What is the output?

```
import java.util.*;
```

```
public class Main {  
    public static void main(String[] args) {  
        List<String> list = Arrays.asList("a", "bb", "ccc");  
  
        list.stream()  
            .filter(s -> s.length() > 1)  
            .map(s -> s.toUpperCase())  
            .forEach(s -> System.out.print(s));  
    }  
}
```

What is the output?

A payment system currently supports:

Credit Card

Now developer modifies existing code to add:

PayNow

PayPal

What principle is violated?

What is the output?

```
public class Main {  
    public static void main(String[] args) {  
        try {  
            System.out.print("A ");  
            int x = 10 / 0;  
            System.out.print("B ");  
        } catch (ArithmeticException e) {  
            System.out.print("C ");  
        } finally {  
            System.out.print("D ");  
        }  
        System.out.print("E");  
    }  
}
```

What is the output?

A restaurant system directly uses:
specific printer brand (HPPrinter)
What is the problem?

What is the output?

```
class Animal {  
    void sound() {  
        System.out.println("Animal sound");  
    }  
}
```

```
class Dog extends Animal {  
    void bark() {  
        System.out.println("Dog bark");  
    }  
}
```

```
public class Main {  
    public static void main(String[] args) {  
        Animal a = new Dog();  
        Dog d = (Dog) a;  
        d.bark();  
    }  
}
```

What is the output?

In Scenario: “User books a ride (Grab/TADA)” Which is a Control object?

What is the output?

```
class Animal { }

class Dog extends Animal {
    void bark() {
        System.out.println("Bark");
    }
}

public class Main {
    public static void main(String[] args) {
        Animal a = new Animal();

        if (a instanceof Dog) {
            Dog d = (Dog) a;
            d.bark();
        } else {
            System.out.println("Not a Dog");
        }
    }
}
```

What is the output?

A PaymentService class:

**receives CreditCard as method parameter
does not store it**

What is the relationship?

A Team has many Players

Players can exist independently

Players can move to other teams

What is the relationship?

```
class Animal {  
    void makeSound() {  
        System.out.println("Animal sound");  
    }  
}
```

```
class Dog extends Animal {  
    void bark() {  
        System.out.println("Dog barks");  
    }  
}
```

```
public class Main {  
    public static void main(String[] args) {  
        Animal a = new Dog(); // Line 1  
        a.makeSound();        // Line 2  
        a.bark();              // Line 3  
    }  
}
```

What will happen when this code is compiled and executed?

What will happen when this code is compiled and executed?

Read the following scenario and identify the most appropriate set of entity classes.

A game system allows players to join matches. Each player has a username and score. Matches consist of multiple players and have a start time and end time. The system records the results of each match, including the winner. Which of the following best represents the entity classes?

```
interface A {  
    default void show() {  
        System.out.println("A");  
    }  
}
```

```
interface B {  
    default void show() {  
        System.out.println("B");  
    }  
}
```

```
class Test implements A, B {  
}
```

```
public class Main {  
    public static void main(String[] args) {  
        Test t = new Test();  
        t.show();  
    }  
}
```

What happens?

What happens?

① The Slido app must be installed on every computer you're presenting from

```
interface Greeting {  
    default void sayHello() {  
        System.out.println("Hello from default");  
    }  
  
    static void sayHi() {  
        System.out.println("Hi from static");  
    }  
}
```

```
class Person implements Greeting {  
}
```

```
public class Main {  
    public static void main(String[]  
args) {  
        Person p = new Person();  
        p.sayHello(); // Line 1  
        p.sayHi();    // Line 2  
    }  
}
```

What happens?

**Consider the previous Java code,
What happens?**
