

Discussion 1

How can you read a file (say, `data.txt`) line by line, and print each line in uppercase?

Discussion 2

What will happen to your program or file if you open a file using the “`with open()`” syntax but forgotten to close the file later?

Discussion 3

What is a virtual environment in Python, and why is it useful?

Discussion 4

Assuming you have already created a virtual environment named “`flask-project`”. What is the command to activate and deactivate the virtual environment on a Windows machine?

Discussion 5

What is the command to check and list down all the packages installed?

Discussion 6

How does one install Python package with a specific version (e.g., `flask` version 3.0.0)?

Discussion 7

How to check versions available for a package (e.g., `flask`)?

Discussion 8

Virtual Environments and Jupyter Notebook

How to list all Python packages installed in the current environment using pip?

Discussion 9

What are some common ways to format text in Markdown within a Jupyter Notebook? (bold, italics, strikethrough, insert image, showing inline code, showing code block)
